Sage Intacct Inventory Management

Control costs and optimize inventory levels with real-time automation and full-time visibility.

Inventory control can make or break efficiency, customer satisfaction, and profitability. Knowing what you have, how much you have, where it is, and what it's all worth is essential to the health of your business. Sage Intacct Inventory Management works hand-in-hand with your purchasing and order entry processes to keep you in control across locations from procure to pay.

Accurate valuation: getting to your true cost of goods

Whether you maintain inventory to serve clients, or work in retail or distribution, knowing the value of your inventory is essential to understanding your organization's financial health. Sage Intacct helps you by calculating value based on your business requirements and capturing added costs such as shipping or value adds, so you can get to a true cost of goods.

Simplify transfers and maintain optimum inventory levels for a healthy cash flow

Maintaining healthy inventory levels requires a strategic balance between serving customers and restricting capital. Manage inventory across multiple locations while using replenishment processes to automate reorder policies by inventory levels and even the time of year.

Streamline physical counts to help reduce variances, write-offs and write-downs

Use standard templates for adjustments, transfers, damaged goods, scrap, and more. Or, create your own templates to fit your organization. Eliminate manual data entry and gain real-time visibility with barcoding and scanning. Sage Intacct Inventory Automation brings automation and efficiency to receipts, transfers, issues, and counts.

### Confidently make decisions with accurate, real-time data

Slice and dice by the performance drivers important to your business. Sage Intacct's real-time inventory management software features comprehensive built-in reports, so you can see across locations, products, inventory status, and replenishment projections, at any given moment.

Using flexible dimensions, Sage Intacct combines operational and financial data into a complete, real-time view of your company.

Control throughout the value chain

Inventory costing

- Multiple costing methods: Standard, Average, FIFO, and LIFO
- Automated recalculation capturing costs from previous or later periods
- Landed costs allocating for costs like freight, duties and taxes across items for cost of goods sold (COGS) calculations
- COGS for non-inventory items
- Tiered pricing

Sage

Inventory tracking

- User-defined inventory transactions to receive, sell, transfer, ship, drop ship, adjust, fulfill and dispose

- Real-time stock level lookup, overall and by warehouse

- Warehouse location tracking by aisle, row, and bin

- Serial number, lot/batch, expiration date, and bin tracking

- User defined unit of measure

- Create inventory and non-inventory items and control where they are seen
